89% of small businesses now use AI. Only 11% have agents in production. That gap is the opportunity — and it is closing fast.

Our research into the 2026 AI landscape reveals three forces converging at once: AI integration costs have dropped 80% since 2023 (from \$15,000 to \$3,000), the global agentic AI market is expanding from \$7.6 billion to \$10.8 billion this year alone, and Gartner forecasts that 40% of enterprise applications will include task-specific AI agents by end of 2026 — up from less than 5% a year ago.

The MENA picture is even more striking. The UAE leads globally at 70.1% AI adoption. Regional governments are actively subsidising SME AI deployment through incentive programmes. The tailwinds here are structural, not temporary.

But here is the risk: Gartner also warns that 40% of agentic AI projects will be cancelled by 2027 — not because the technology fails, but because businesses automate broken processes without redesigning operations first.

The edge goes to businesses that deploy now, with discipline. What workflows are you still running manually that AI could handle by Q3?

Is your business using AI — or just running experiments?

There is a difference. Our latest research shows that 89% of small businesses now use at least one AI-powered tool. But only 11% have autonomous AI agents actually running in production. The rest are still piloting, evaluating, or waiting for the "right moment."

The cost barrier is gone. AI integration for an SME now runs around \$3,000, down from \$15,000 three years ago. And the return is real: businesses implementing AI automation report £5.44 back for every £1 spent.

What is holding your business back from moving from experiment to execution?

Instagram Post

89% of SMEs use AI. Fewer than 1 in 10 are running it properly.

- AI costs dropped 80% — integration now \$3k, not \$15k
- UAE leads global AI adoption at 70.1%
- 40% of AI projects fail due to bad process design, not bad tech

The window is open. Act before it closes.
