

Invoice Creation Implementation Plan

For agentic workers: *REQUIRED SUB-SKILL: Use superpowers:subagent-driven-development (recommended) or superpowers:executing-plans to implement this plan task-by-task. Steps use checkbox (- []) syntax for tracking.*

Goal: Build an invoice generation workflow that reads client and pricing data from three Drive sources, creates a formatted Google Doc invoice, and drafts a Gmail to the client — all in one run.

Architecture: Blueprint-only. Architect reads pipeline + pricing + identity in parallel, assembles invoice content, creates the Google Doc in the client's Invoices folder (created during onboarding), then drafts the Gmail. No Equipment needed — same pattern as client-proposal-document.md.

Tech Stack: Google Drive MCP, Gmail MCP, Markdown blueprint, Claude (Architect)

Scope Note

This plan covers the invoice generation workflow only. Quote generation is a separate plan. The client onboarding plan creates the per-client Drive folder (including an Invoices/ subfolder) — this workflow writes into that subfolder.

File Structure

Action	File	Responsibility
Create	templates/invoice.md	Invoice layout — feeds the Google Doc content
Create	blueprints/invoice-creation.md	Master SOP: read sources, build invoice, create Doc, draft email
Modify	live/state.md	Add invoice-creation to Skills Built table

Requires approval before creating the Blueprint — permissions.md: "Create a new Blueprint: Ask first — always."

Data Sources (already exist)

Source	ID	What we read
Pipeline sheet	1LZFrPC75AgGiUtNJVbjhTVkg1YNHco0uYEF7l9eLAic	Contact name, email, package, deal value

Source	ID	What we read
Pricing sheet	1cAWYT0nodYFeznP4uChN2pFUITkjav5CAwU5MU6FGWI	Package line items, setup and monthly amounts
Identity doc	1ujBao7Z89YjyVFpWAAk_CaIAi8tH9_JmhBfr16Rp79c	Bank details, VAT number, legal name

Task 1: Invoice Template

Files:

- Create: templates/invoice.md

■ **Step 1: Write the template**

Create templates/invoice.md with this exact content:

```
# Invoice

**From:** degiabdo – Abderrahim
**To:** [Client Name / Company]
**Invoice number:** INV-[CLIENT_CODE]-[YYYYMMDD]
**Date:** [YYYY-MM-DD]
**Due:** [DUE_DATE] (30 days from invoice date)

---

## Services Rendered

| Service | Period | Amount |
|-----|-----|-----|
| [Service line 1 – e.g. "Growth CRM Setup"] | [Month YYYY] | €[amount] |
| [Service line 2 – e.g. "Monthly retainer"] | [Month YYYY] | €[amount] |

---

## Summary

| | |
|---|
| Subtotal | €[subtotal] |
| VAT (5%) | €[vat_amount] |
| **Total due** | **€[total]** |

---

## Payment Details

**Bank:** [bank_name from identity doc]
**IBAN:** [IBAN from identity doc]
**BIC / SWIFT:** [BIC from identity doc]
**Payment reference:** INV-[CLIENT_CODE]-[YYYYMMDD]

---

Payment terms: 30 days from invoice date.
Late payment: 2% per month on overdue balances.
VAT registration: [vat_number from identity doc]
```

Questions? Reply to this email.

Abderrahim
degiabdo

■ Step 2: Verify against invoicing requirements

Read the template. Confirm:

- Invoice number follows format: INV- [CLIENT_CODE] - [YYYYMMDD]
- From / To / Date / Due fields are present
- Line items table has: service, period, amount
- Summary table has: subtotal, VAT, total
- Payment details section references all identity doc fields needed
- Payment reference matches the invoice number (for bank reconciliation)
- Late payment clause is present

■ Step 3: Test the template mentally

Substitute: Sahel Cafe Group, Growth CRM package, setup €1,200 + first month €250, UAE client (5% VAT).

Confirm the layout produces a clean, professional invoice.

Expected subtotal: €1,450. VAT: €72.50. Total: €1,522.50.

■ Step 4: Commit

```
git add templates/invoice.md
git commit -m "feat: add invoice template"
```

Task 2: Invoice Creation Blueprint

Requires approval before starting — ask: "Task 1 done. Ready to create blueprints/invoice-creation.md?" Wait for confirmation.

Files:

- Create: blueprints/invoice-creation.md
- Modify: live/state.md

Dependencies: Task 1 must be complete and committed.

■ Step 1: Get approval

Ask Abderrahim: "Invoice template is done. Ready to create blueprints/invoice-creation.md? It will read pipeline + pricing + identity, generate a Google Doc invoice, and draft the Gmail — one run."

Wait for explicit confirmation.

■ Step 2: Write the Blueprint

Create blueprints/invoice-creation.md with this exact content:

```
# Blueprint — Invoice Creation

**Type:** Blueprint only — Architect executes via Google Drive + Gmail MCP
**Template:** `templates/invoice.md`
**Voice rules:** `.claude/rules/clients.md`
**Pipeline Sheet ID:** 1LZFrPC75AgGiUtNJVbjhTVkg1YNHco0uYEF7l9eIAIc
**Pricing Sheet ID:** 1cAWYT0nodYFeznP4uChN2pFUITkjav5CAwU5MU6FGWI
```

```

**Identity Doc ID:** 1ujBao7Z89YjyVFpWAAK_CaIAi8tH9_JmhBfr16Rp79c

**Trigger:** When work has been delivered and it's time to bill. Say: "Create invoice for [Client Name]."

---

## Goal

Generate a complete invoice as a Google Doc and draft a Gmail to the client for review. One run.
Never send without Abderrahim reviewing the draft first.

---

## Required Inputs

| Input | Source |
|-----|-----|
| Client name | Spoken |
| Invoice line items | Spoken – "setup fee + first month" or "monthly retainer for May" |
| Billing period | Spoken – e.g. "May 2026" |
| Client Drive folder ID | From onboarding run – or search Drive for "Client – [Name]" |

If the client folder ID is unknown: call `mcp__claude_ai_Google_Drive__search_files` with query
`name contains "Client – [ClientName]"`. Record the Invoices/ subfolder ID from the results.

If pricing amounts are not confirmed: stop. "What amounts should this invoice include? I won't draft
without confirmed numbers."

---

## Sequence

### Step 1 – Read all three sources in parallel

Call `mcp__claude_ai_Google_Drive__read_file_content` three times simultaneously:

1. **Pipeline sheet** – find client row. Record: contact name, contact email, deal value, package,
stage.
2. **Pricing sheet** – match the package from pipeline notes. Record: setup amount, monthly amount.
3. **Identity doc** – extract: legal name, bank name, IBAN, BIC/SWIFT, VAT number.

If any read fails: stop. Report which source failed and its ID.

If client is not in pipeline: stop. "Client [name] not found in pipeline."

---

### Step 2 – Calculate invoice amounts

From the spoken line items and the pricing sheet data:

**Line items to include (confirm with Abderrahim if unclear):**
- Setup fee: €[setup from pricing sheet] – if this is the first invoice
- Monthly retainer: €[monthly from pricing sheet] – for [billing period]
- Or both, or just one – based on what was spoken

**Calculations:**
- Subtotal = sum of all line item amounts
- VAT = Subtotal × 0.05 (apply only for UAE-based clients – check pipeline for country/region)
- Total = Subtotal + VAT
- Due date = today's date + 30 days (YYYY-MM-DD)
- Client code = first 3 letters of company name, uppercase (e.g. SAH for Sahel Cafe Group)
- Invoice number = `INV-[CLIENT_CODE]-[YYYYMMDD]`

```

Step 3 – Build invoice content

Open `templates/invoice.md`. Populate every placeholder:

Placeholder	Value
`[Client Name / Company]`	From pipeline
`[CLIENT_CODE]`	First 3 letters of company, uppercase
`[YYYYMMDD]`	Today's date, no dashes
`[YYYY-MM-DD]`	(date) Today's date
`[DUE_DATE]`	Today + 30 days
Service line 1	First line item + period + amount
Service line 2	Second line item if applicable
`[subtotal]`	Calculated subtotal
`[vat_amount]`	Subtotal × 0.05 (or 0 if non-UAE)
`[total]`	Subtotal + VAT
`[bank_name]`	From identity doc
`[IBAN]`	From identity doc
`[BIC]`	From identity doc
`[vat_number]`	From identity doc

Step 4 – Create the Google Doc

Call `mcp\_\_claude\_ai\_Google\_Drive\_\_create\_file` with:

- `title`: `Invoice\_[ClientCode]\_[YYYYMMDD]`
- `contentType`: `text/plain`
- `disableConversionToGoogleType`: false (convert to Google Doc)
- `textContent`: populated invoice text from Step 3
- `parentId`: client's Invoices/ subfolder ID

Record the returned file URL and file ID.

If creation fails: report the exact error. Do not continue to Step 5.

Step 5 – Draft the Gmail

Draft the email body:

```

Subject: Invoice [INV-CLIENT\_CODE-YYYYMMDD] – [service description]

Hi [Contact first name],

Please find your invoice attached via the link below.

Invoice: [Google Doc URL]

Amount due: €[total]

Due date: [DUE\_DATE]

Payment details are included in the document. If you have any questions, just reply here.

Abderrahim

degiabdo

```

Call `mcp\_\_claude\_ai\_Gmail\_\_create\_draft` with:

- `to`: contact email from pipeline
- `subject`: `Invoice [INV-CLIENT\_CODE-YYYYMMDD] – [service description]`
- `body`: above text (plain text)

```

Never send. Save as draft only. Record the Gmail draft ID.

---

### Step 6 – Report

```
Invoice Created – [Client Name] – [DATE]

[x] Sources read: pipeline, pricing, identity
[x] Amounts: subtotal €[subtotal] + VAT €[vat] = total €[total]
[x] Google Doc: [URL]
Saved to: Client – [Name]/Invoices/
[x] Gmail draft saved – subject: Invoice [invoice number]
Draft ID: [ID]

Review the Google Doc and the Gmail draft before sending.
Due date on invoice: [DUE_DATE].
```

---

## Failure Handling

| Failure | Response |
|-----|-----|
| Client not found in pipeline | Stop. "Client [name] not found. Check spelling." |
| Pricing not confirmed | Stop. "What amounts should this invoice include?" |
| Any source read fails | Stop. Report which source and its ID. |
| Client Invoices folder not found | Search Drive for "Client – [Name]". If still not found, ask for the folder ID. |
| Google Doc creation fails | Report exact error. Do not continue. |
| Gmail draft fails | Report exact error. Log the Google Doc URL. |

---

## Invoicing Rules (from intel/pricing.md)

- Always include both setup and monthly when it's the first invoice
- Pricing in euros (€) unless client explicitly requested local currency
- VAT at 5% for UAE clients only – check pipeline for region
- Due date is always 30 days from invoice date
- Never send the invoice directly – Abderrahim reviews all outbound invoices

## Lessons Learned
[Append after each run]

```

■ Step 3: Dry-run the Blueprint verbally

Walk through each step using: Sahel Cafe Group, Growth CRM setup (€1,200) + first month retainer (€250), May 2026, UAE client.

Step	Expected output	Passes?
Step 1: sources read	Pipeline: contact + email found. Pricing: Growth = €1,200 setup, €250/month. Identity: IBAN + VAT number extracted.	[]

Step	Expected output	Passes?
Step 2: amounts	Subtotal €1,450. VAT €72.50. Total €1,522.50. Due date = today + 30 days.	[]
Step 3: content	All 14 placeholders in invoice.md filled. No [brackets] remaining.	[]
Step 4: Google Doc	File Invoice_SAH_20260504 created in Sahel's Invoices/ folder. URL returned.	[]
Step 5: Gmail draft	Draft saved. Subject: "Invoice INV-SAH-20260504 — Growth CRM Setup + May Retainer".	[]
Step 6: report	Clean summary with URL, draft ID, total, due date.	[]

Fix any step that doesn't produce a clean output before committing.

■ Step 4: Update live/state.md

Add to Skills Built table:

```
| Invoice creation | blueprints/invoice-creation.md | None (Google Drive + Gmail MCP) |
```

■ Step 5: Commit

```
git add blueprints/invoice-creation.md live/state.md
git commit -m "feat: add invoice creation blueprint"
```

Self-Review

Spec coverage

Requirement	Task
Automate generation from template	Template (Task 1) + Blueprint reads it and fills it
Pull pricing automatically	Blueprint Step 1 reads pricing sheet
Pull identity/bank details automatically	Blueprint Step 1 reads identity doc
Never send without review	Enforced in Blueprint Step 5 and Failure Handling
Correct VAT logic	Blueprint Step 2 — UAE only, explicitly flagged
Invoice number format	Blueprint Step 2 — INV-[CODE]-[YYYYMMDD]

Placeholder scan

No TBDs. All placeholders are defined with exact sources. One runtime dependency: client's Invoices/ subfolder ID — Blueprint Step 1 handles the search if unknown.

Type consistency

- Pipeline Sheet ID, Pricing Sheet ID, Identity Doc ID match IDs used in blueprints/client-proposal-document.md
- MCP tool names match existing blueprints

Plan written: 2026-05-04
